

# SERIES 240 EC

Active ingredient: Clethodim (cyclohexanedione) 240 g/ℓ

A selective systemic herbicide for post-emergence control of grass weeds and volunteer maize (including glyphosate tolerant maize) in crops as indicated

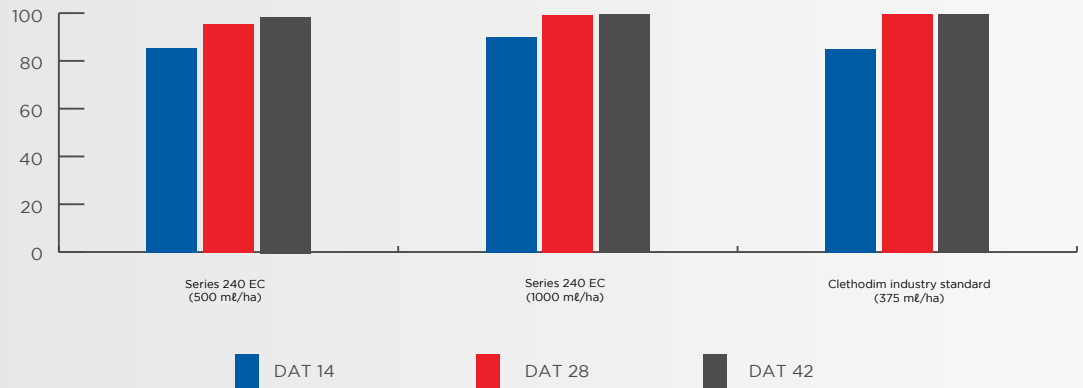

HERBICIDE

Summary of 3 trials showing the performance (mean percentage efficacy) of SERIES 240 EC on controlling volunteer maize (*Zea mays*) plants from the previous season

\* Direct at 0.1 % and Velocity Dry Max at 0.5 % were added to all treatments

## Features

- SERIES 240 EC is a HRAC Group A herbicide
- Systemic herbicide
- Post-emergent control of annual and perennial grasses in maize
- Absorbed by leaves
- Glyphosate compatible
- Rapidly absorbed
- Quick translocation to the root system and growing parts of the plant

## Label recommendations

*Dosage rates:*

- 0.5 ℓ - 1 ℓ/ha
- Refer to label for recommended dosage rates with tank-mix partners and soil clay percentages

## Do's and don'ts

- Do not plant maize within 21 days after application for dosage rates up to 0.5 ℓ/ha (higher rates are not recommended when maize is to be planted as a follow-up crop)
- Allow at least 4 days after the SERIES 240 EC application before applying any other agrochemical treatment

ALWAYS READ THE LABEL BEFORE USE

SERIES 240 EC Active ingredient: Clethodim (cyclohexanedione) 240 g/ℓ, Reg. No. L8913 (caution) Act 36 of 1947
