

SLASH PLUS 540 SL

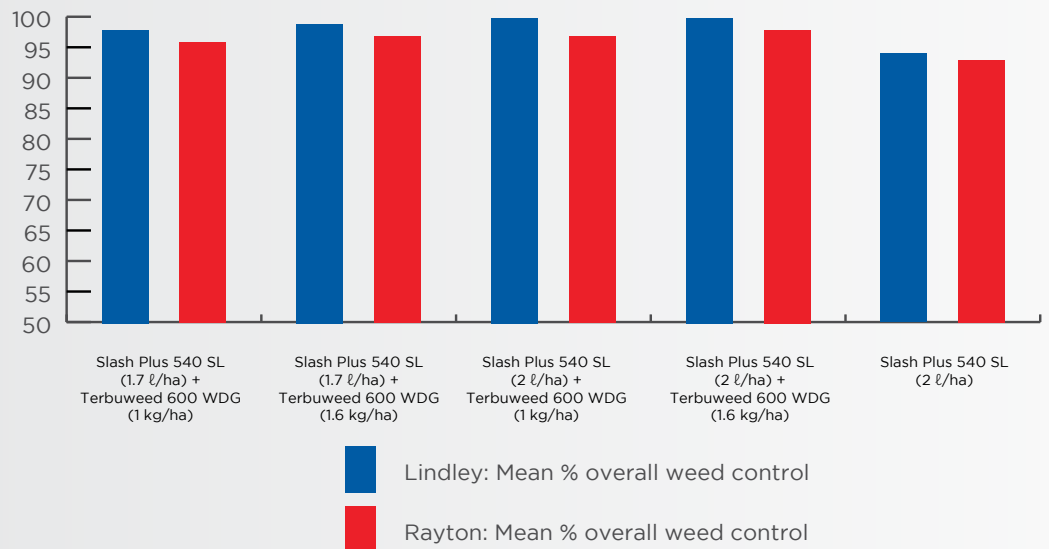

Active ingredients: Glyphosate (glycine) 540 g ae/l
(glyphosate potassium salt 665 g/l)

A soluble concentrate, non-selective, systemic post-emergence herbicide with slight or no soil activity for the control of weeds in maize

HERBICIDE

Summary of 2 trials done showing the performance of SLASH PLUS 540 SL and Terbuweed 600 WDG at controlling a number of weeds (4 different weeds) when applied post-emergently on glyphosate tolerant maize. Graph shows the mean percentage overall weed control.

Features

- SLASH PLUS 540 SL (glyphosate) systemic herbicide, provides excellent broad-spectrum weed control (HRAC Herbicide Group Code G9)
- Glyphosate and all its salts are non-volatile and readily soluble in water (SL formulation)
- One application can control perennials for many years and applications can be done in extremely low water volumes
- Reduces the competition with weeds for water, light and nutrients
- Non-selective herbicide, thus minimizes the use of selective and/or residual herbicides
- Glyphosate moves throughout the plant and controls growing shoots and roots, thus providing long term control of a wide range of weed species
- Water-based product; no volatile characteristics and is readily miscible with water (mixes well and allows for faster activity within the plants)
- Extremely cost effective weed control

ALWAYS READ THE LABEL BEFORE USE

SLASH PLUS 540 SL Active ingredient: Glyphosate (glycine) 540 g ae/l [(glyphosate potassium salt) 665 g/l], Reg. No. L8819 (caution), Act 36 Of 1947
Registration holder: Universal Crop Protection (Pty) Ltd. Co. Reg. No. 1983/008184/07. PO Box 801, Kempton Park, 1620.

Features (Continued)

- Ideal candidate for an IPM strategy and allows the adoption of conservational agriculture (intern reducing the depth and intensity of land cultivations)

Label recommendations

Glyphosate tolerant maize:

General post-emergence weed control

Annual grasses and broad leaf weeds:

- 1.3 ℓ/ha SLASH PLUS 540 SL
(apply before 100 mm height or 8-leaf stage of weeds)

Annual grasses and broadleaf weeds:

- 1.7 ℓ/ha SLASH PLUS 540 SL
(apply between 100 and 200 mm or up to 12-leaf stage)

Difficult to control species requiring a follow-up spray:

- Wandering Jew (*Commelina benghalensis*),
- Morning glory (*Ipomoea purpurea*),
- Common purslane (*Portulaca oleracea*),
- Devil's thorn (*Tribulus terrestris*)
2.0 ℓ/ha SLASH PLUS 540 SL

Difficult to control biennial and perennial weed species:

- Yellow nutsedge (*Cyperus esculentus*),
- *Conyza spp.*
2.0 ℓ/ha SLASH PLUS 540 SL

Do's and don'ts

- Apply at the 3-leaf stage; follow up with 2.0 ℓ/ha 10 - 20 days later
- Apply at the 4- to 5-leaf stage; follow up with 2.0 ℓ/ha 10 - 20 days later
- Apply before flowering or before first flowers appear
- Do not apply to any maize variety or hybrid, not properly indicated as containing the glyphosate tolerant gene
- Herbicidal action of SLASH PLUS 540 SL may become visible from 5 days after application
- Do not spray whilst weeds are wet, dormant or under any stress
- There are no crop rotation restrictions following application of this product
- Allow 6 hours after application before the planting operation
