

Herbicide

SUNDRY 500 WP

Reg. No. L 9299 Act/Wet No. 36 of/van 1947

1: 22/7/2013- Aug2019

A wettable powder herbicide for pre-emergence control of annual broadleaf weeds in crops as listed. Registered also for use in forestry plantations/areas.

'n Benatbare poeier onkruiddoder vir vooropkoms beheer van eeniarige breëblaaronkruide in gewasse soos aangedui. Geregistreer ook vir gebruik in bosbouplantasies/areas.

ACTIVE INGREDIENT / AKTIEWE BESTANDDEEL

flumioxazin (N-phenylimide)

500 a/ka

flumioksasin (N-fenielimied)

CAUTION / VERSIGTIG

WARNINGS

- Risk of crop injury: SUNDRY 500 WP may adversely affect groundnuts or soybeans under certain climatic conditions. In certain scenarios yield and quality may be affected adversely. These conditions include wet conditions (>20 mm rain), especially in combination with cold temperatures, sandy soils (< 10 % clay) and/or overcast weather within 28 days after planting. However, the exact parameters causing such damage cannot be determined accurately due to yearly variation between farms and fields and cultivar susceptibility. By using this product, the user is therefore warned that he accepts risk of crop injury.
- Handle with care.
- Harmful when swallowed.
- May irritate eyes and skin.
- Store in a cool, dry, well-ventilated place in tightly closed original container.
- Store away from food, feeds, seed, fertilizers and other agricultural remedies.
- Keep out of reach of children, uninformed persons and animals.
- Toxic to fish and other aquatic organisms.
- Do not spray over or allow drift to contaminate water or adjacent areas.
- Re-entry: Do not enter treated area until spray deposit has dried unless wearing protective clothing

Although this remedy has been extensively tested under a large variety of conditions, the registration holder does not warrant that it will be efficacious under all conditions, because the action and effect thereof may be affected by factors such as abnormal soil, climatic and storage conditions, quality of dilution water, compatibility with other substances not indicated on the label and the occurrence of resistance of the weeds to the remedy concerned, as well as by the method, time and accuracy of application. The registration holder further does not accept responsibility for damage to crops, vegetation, the environment or harm to man or animal or for lack of performance of the remedy concerned, due to failure of the user to follow the label instructions or to the occurrence of conditions, which could not have been foreseen in terms of the registration. Consult the supplier in event of any uncertainty.

PRECAUTIONS

- Do not inhale the dust or spray mist.
- Wear rubber gloves and face shield when handling the concentrate.
- Avoid contact with skin, eyes and clothing. In case of contamination flush immediately with water.
- Wash contaminated clothing daily.
- Wash with soap and water after use or accidental skin contact.
- In case of eye contact, rinse immediately with running water.
- Do not eat, drink or smoke whilst mixing, applying the product or before washing hands and face or change of clothing.
- Prevent drift onto other crops, grazing, rivers, dams or areas not under treatment.
- Do not apply where roots of desirable plants can absorb the chemical.
- Do not mix or load within at least 15 metres of boreholes, streams, rivers and dams. Do not apply within at least 15 metres from boreholes, streams and rivers. Do not apply within at least 60 metres from dams.
- Clean the applicator before using with other material and dispose of wash water where it will not contaminate food, grazing, boreholes, rivers or dams.

SUNDRY 500 WP PAGE 2 OF 9

- To clean the spray tank:
 - 1. Drain the spray tank completely and then flush the tank, boom and hoses with clean water. Drain again.
 - 2. Fill the tank with clean water and add household ammonia (3 % active) at the rate of 1 litre per 100 litres water. Circulate the ammonia solution through the tank, boom and hoses for at least 15 minutes.
 - 3. To remove traces of ammonia, rinse the tank with clean water and flush through booms and hoses.
 - 4. Repeat steps 2 and 3.
 - 5. Nozzles and filters must be removed and cleaned separately with an ammonia solution at the same concentration as above.
 - 6. Remove any contamination on the outside of the spraying equipment by washing with clean water.
- Containers and packages must be completely emptied before being disposed of. Shake out thoroughly
 into the applicator and destroy the empty container/bag thereafter in the described manner.
- Destroy the empty container/bag by perforation and flattening and dispose of it in a safe manner.
- Never re-use the empty container/bag for any other purpose.
- Prevent contamination of food, feeds, drinking water and eating utensils.

RESISTANCE WARNING

SUNDRY 500 WP is a group code E herbicide. Any weed population may contain individuals naturally resistant to **SUNDRY 500 WP** and other group code E herbicides. The resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly. These resistant weeds may not be controlled by **SUNDRY 500 WP** or any other group code E herbicide.

To delay herbicide resistance:

- avoid exclusive repeated use of herbicides from the same herbicide group code. Alternate or tank mix with products from different herbicide group codes,
- integrate other control methods (chemical, cultural, biological) into weed control programmes.

For specific information on resistance management contact the registration holder of this product.

GENERAL PRODUCT INFORMATION

- **SUNDRY 500 WP** is a pre-emergence herbicide and will only control weeds that have not germinated at the time of application. Thus, if existing weeds are present at time of application, these may have a detrimental effect on the efficacy of **SUNDRY 500 WP**.
- **SUNDRY 500 WP** is activated by moisture and optimal weed control is achieved when applied to a moist soil on a fresh seedbed, followed by ± 15 mm rainfall or irrigation within one week of application. **However**, note that flood irrigation can result in reduced weed control.

USE RESTRICTIONS

- Follow-up crops To avoid injury to follow-up crops, the following waiting periods should be heeded: Groundnuts and soybeans 2 weeks
 - All other crops 4 months (a test planting is recommended).
- <u>DO NOT EXCEED</u> the specified dosage rates of any of the products <u>SUNDRY 500 WP</u>, <u>Alachlor 384</u>
 <u>EC or Palladium 960 EC</u> as crop injury may result ensure <u>STRICT ADHERENCE</u> to the specified rates.
- Do not apply **SUNDRY 500 WP** to poorly drained soils with a compaction layer. Water logging in the presence of herbicides may lead to yield reduction due to stand reduction and/or stunted growth.
- SUNDRY 500 WP may not be applied through any type of irrigation system.
- Do not spray **SUNDRY 500 WP** with alkaline water use a buffer/acidfier to lower water pH if necessary.
- The application of lime to soils onto which **SUNDRY 500 WP** was applied, may lead to desorption of the **SUNDRY 500 WP** molecules from the soil particles. This may increase the possibility of crop damage.
- Do not apply SUNDRY 500 WP to any groundnut or soybean fields if any triazine containing herbicide was applied to a preceding crop, unless not more than 750 g triazine active ingredient per hectare was applied and at least 9 months have passed after the triazine application.
- Spray drift due to wind, air currents or incorrect spraying equipment etc. coming into contact with green
 chlorophyll containing plant tissue will result in herbicide damage. It is therefore important to ensure that
 SUNDRY 500 WP applications will not come into contact with chlorophyll containing plant tissue on
 deciduous fruit or citrus fruit trees, vines or adjacent non-target crops.
- **SUNDRY 500 WP** shall only be applied to vines, deciduous fruit or citrus trees as a pre-blossom application, due to the inability of applicators to prevent drift.

SUNDRY 500 WP PAGE 3 OF 9

GROUNDNUTS AND SOYBEANS

- All "USE RESTRICTIONS" above are applicable to both groundnuts and soybeans.
- <u>Plant depth</u>: The optimum planting depth must be observed for the crop as recommended by ARC-Grain Crops Institute:

Groundnuts: 50 to 75 mm (depending on seedbed and soil conditions)

Soybeans: 20 to 60 mm (depending on seedbed and soil conditions)

- On lands subjected to wind erosion, two scenarios may occur:
 - Poor weed control due to wind transfer of the herbicide.
 - Sand blasting damage/weakening of seedlings, therefore making them more susceptible to herbicide damage.
- Apply SUNDRY 500 WP pre-emergence on groundnuts or soybeans 2 weeks prior to planting, during
 planting or immediately after planting the crop to be treated.
- Only use high quality, fresh (preceding season) fungicide treated, certified seed with good viability.
 Observe standard ARC-Grain Crop Institute recommendations for fungicide seed treatment and addition of trace element e.g. molybdenum.
- The occurrence of seedling diseases leads to germination and seedling vitality losses, which will be aggravated by herbicide(s).
- Any of the above factors listed or combinations there-of, will increase the risk of damage caused by the herbicide(s).
- The treatment of the crop's seed with *Rhizobium* inoculant at time of planting is recommended to obtain stronger healthier plants.

DIRECTIONS FOR USE: Use only as indicated.

Compatibility:

SUNDRY 500 WP is compatible with **ALACHLOR 384 EC** (L 4348 / N-AR 1342), **PALLADIUM 960 EC** (L 9360 / W 130772), **Scat® 360 SL** and **SKOFFEL® 200 SUPER** (L 6328 / W 130059 / N-AR 1097). However, as the formulation of other products may change without the knowledge of this registration holder and the quality of water may vary from farm to farm, a physical compatibility test should always be carried out prior to application.

Mixing Instructions:

- Half-fill the spray tank with clean water and ensure agitation.
- First add the required amount of **SUNDRY 500 WP** in the form of water-soluble sachets and then add the rest of the water. Agitation must be maintained at all times during mixing and application.
- When tank-mixing **SUNDRY 500 WP** with another herbicide, read the label of the complementary herbicide and adhere closely to the manufacturer's recommendations:
 - First add the required amount of **SUNDRY 500 WP** in the form of water-soluble sachets.
 - Continue filling the spray tank with water and add the required amount of complimentary herbicide just before the tank is filled to its full level. Keep the chemicals in continuous suspension by maintaining agitation.
- Tank mixtures must be sprayed out immediately and should not be allowed to stand in the spray tank overnight.

Application:

- Only use accurately calibrated conventional spray equipment that is in good working order for the application of SUNDRY 500 WP. Good results are obtained with flat-fan spray nozzles, to ensure even spray distribution.
- Where there is a danger of fine droplets drifting onto susceptible non target plants/crops, use low drift air-mix type or equivalent nozzles. Use 200 to 300 litres per hectare total spray volume for overall ground application.
- Apply **SUNDRY 500 WP** onto an even, well-prepared seedbed which is free of clods, trash and weeds.
- If dry weather conditions should prevail for a period of 7 to 10 days after application, weeds may germinate and develop. If this happens, use shallow cultivation with a rotary harrow to control these weeds and to mix the herbicide with the top 10 to 20 mm of soil. Deeper cultivation should be avoided as untreated soil may be brought to the surface and reduced efficacy could result.

SUNDRY 500 WP PAGE 4 OF 9

CROP RECOMMENDATIONS Groundnuts and Soybeans:

- Application timing:
 - Apply SUNDRY 500 WP or SUNDRY 500 WP plus Scat® 360 SL 2 weeks before the intended planting date, or
 - Apply **SUNDRY 500 WP** on its own or in a tank mixture with **Alachlor 384 EC** or **Palladium 960 EC** at planting or within 48 hours after planting.
- Banded applications of **SUNDRY 500 WP**: Use proportionately less product per hectare for a band versus a broadcast application.

Forestry:

- Refer to "USE RESTRICTIONS" and "APPLICATION" for more detail.
- If applied to existing weeds, a tank mixture with Skoffel® 200 Super or Scat® 360 SL should be used, or the site should be cleared using chemical or mechanical means prior to the application of SUNDRY 500 WP.
- Prevent overlapping of the spray swaths.
- Apply in 200 to 400 litres water per hectare.

APPLICATION RATES

Refer to "USE RESTRICTIONS", "DIRECTIONS FOR USE" and "CROP RECOMMENDATIONS" above.

Crop	% Clay	Dosage per hectare	Remarks
Groundnuts		100 g SUNDRY 500 WP	
		OR	
	0 to >30	100 g SUNDRY 500 WP	Apply 2 weeks prior to the intended date of planting.
		PLUS	
		1.0 to 3.0 ℓ Scat[®] 360 SL	
		100 g SUNDRY 500 WP	
		OR	
		70 to 80 g SUNDRY 500 WP	
	11 to >30	PLUS	Apply at planting, or within 48 hours
		3.0 ℓ Alachlor 384 EC	after planting.
		OR	
		0.65 to 1.0 <i>ℓ</i> Palladium 960 EC	

SUNDRY 500 WP PAGE 5 OF 9

Crop	% Clay	Dosage per hectare	Remarks
<u>Soybeans</u>		100 g SUNDRY 500 WP	
		OR	
	0 to >30	100 g SUNDRY 500 WP	Apply 2 weeks prior to the intended date of planning.
		PLUS	
		1.0 to 3.0 ℓ Scat® 360 SL	
		80 to 100 g SUNDRY 500 WP	
		PLUS	
	11 to 20	4.0 to 4.5 ℓ/ha Alachlor 384 EC	
	11 10 20	OR	
		0.65 to 1.0 <i>ℓ</i> Palladium 960 EC	
		80 to 100 g SUNDRY 500 WP	
		PLUS	
	21 to 30	4.0 to 5.0 ℓ/ha Alachlor 384 EC	Apply at planting, or within 48 hours
		OR	after planting.
		0.65 to 1.0 <i>ℓ</i> Palladium 960 EC	
		80 to 100 g SUNDRY 500 WP	
		PLUS	
	>31	5.0 ℓ/ha Alachlor 384 EC	
		OR	
		0.65 to 1.0 <i>ℓ</i> Palladium 960 EC	

NOTES

- When **SUNDRY 500 WP** is used in conjunction with any other agricultural remedy, all **WARNINGS**, **PRECAUTIONS** and **DIRECTIONS FOR USE** mentioned on these labels, must be adhered to.
- Seed size: Smaller sized seed may be more susceptible to herbicide damage than larger seeds.
- SUNDRY 500 WP may be applied 2 weeks prior to planting. By doing this, the risk of crop injury will be reduced but the residual efficacy of the SUNDRY 500 WP and the control of weeds in the planting row may be compromised. Existing weeds can be controlled by adding 1.0 to 3.0 litres of Scat® 360 SL to the SUNDRY 500 WP.

SUNDRY 500 WP PAGE 6 OF 9

Crop	Dosage rate per hectare	Remarks
Afforestation Pine (Pinus patula) Wattle (Acacia mearnsii) Bluegum (Eucalyptus grandis)	200 g	Pre-plant treatment: Apply prior to the transplant of the seedlings in at least 250 litres water per hectare. To obtain optimum weed control, ensure minimal disturbance of the soil during the transplanting.

IMPORTANT

- 1. If applied to existing weeds, 1.5 to 5.0 litres **Skoffel® 200 Super OR** 1.0 to 3.0 litres **Scat® 360 SL** must either be added to the **SUNDRY 500 WP**, or the area to be treated must be cleared of weeds by chemical or mechanical means, prior to the application of **SUNDRY 500 WP**.
- 2. Do not apply SUNDRY 500 WP to trees grown in any growth medium but soil.

Dino (Dinus notulo)		Post transport of seedlings:
Pine (Pinus patula)	200 g/ha	Apply in at least 250 litres water per hectare. SUNDRY
Blue gum (Eucalyptus grandis)		500 WP may be applied over the top of the seedlings.

IMPORTANT

- Ensure that seedlings are of good quality and free of disease and insect injury.
- Slight scorching of the leaves or needles may occur when **SUNDRY 500 WP** is applied over the top of the seedlings. This is of a transient nature and will be soon outgrown.
- Blue gums affected with *Botrytis* may be severely scorched, or even killed. Do not apply to trees which were grown in any other growth medium than soil.

WEEDS NORMALLY CONTROLLED WITH 100 g SUNDRY 500 WP per hectare:		
Annual broadleaf weeds:		
Ageratum conyzoides	Invading Ageratum	
Amaranthus hybridus	Common pigweed	
Conyza bonariensis	Flax-leaf fleabane	
Crotalaria sphaerocarpa	Mealie crotalaria	
Erodium moschatum	Musk heron's bill	
Flumaria officinalis	Common fumitory	
Ipomoea purpurea	Morning glory	
Oenothera stricta	Evening primrose	
Oxalis latifolia	Red garden sorrel	
Raphanus raphanistrum	Wild radish	
Richardia brasiliensis	Tropical Richardia	
Schkuhria pinnata	Dwarf marigold	
Tribulus terrestris	Devil's thorn	
Weeds controlled variably:		
Datura ferox	Large thorn apple	
Tagetes minuta	Khaki weed	
Bidens pilosa	Common blackjack	

SUNDRY 500 WP PAGE 7 OF 9

WEEDS NORMALLY CONTROLLED WITH 200 to 400 g SUNDRY 500 WP per hectare:		
Weeds listed above PLUS:		
Acalypha ecklonii	False nettle-brush	
Cenia turbinata	Goose daisy	
Fumaria muralis	Fumitory	
Hydrocotyle americana	Navelwort	
Oenothera rosea	Rose evening primrose	
Plantago lanceolata	Narrow-leaved ribwort	
Portulaca oleracea	Purslane	
Setaria verticillata	Sticky bristle grass	
Sonchus oleraceus	Sow thistle	
Weeds controlled variably:		
Bidens pilosa	Common blackjack	
Chenopodium album	White goose foot	
Conyza floribunda	Fleabane	
Euphorbia helioscopia	Umbrella milkweed	
Polygonum aviculare	Prostrate knotweed	
Tagetes minuta	Khakiweed	

WEEDS NORMALLY CONTROLLED IN GROUNDNUTS AND SOYBEANS WITH A TANK MIXTURE OF 80 g SUNDRY 500 WP per hectare PLUS Alachlor 384 EC / Palladium 960 EC:		
Annual grasses:		
Eleusine indica	Goose grass	
Broadleaved weeds:		
Amaranthus hybridus	Common pigweed	
Chenopodium album	White goosefoot	
Chenopodium carinatum	Green goosefoot	
Crotalaria sphaerocarpa	Mealie Crotalaria	
Schkuhria pinnata	Dwarf marigold	
Tribulus terrestris	Devil's thorn	
Weeds controlled variably:		
Datura ferox	Large thorn apple	
Tagetes minuta	Khakiweed	

SUNDRY 500 WP PAGE 8 OF 9

WEEDS NORMALLY CONTROLLED IN SOYBEANS WITH A TANK MIXTURE OF 100 g SUNDRY 500 WP per hectare PLUS Alachlor 384 EC / Palladium 960 EC:			
Annual grasses:			
Brachiaria eruciformis	Sweet signal grass		
Chloris virgate	Feathertop Chloris		
Digitaria sanguinalis	Crab finger grass		
Echinochloa crusgalli	Barnyard grass		
Eleusine indica	Goose grass		
Panicum maximum	Common buffalo grass		
Panicum schinzii	Sweet buffalo grass		
Setaria pallide-fusca	Red bristle grass		
Setaria verticillata	Sticky bristle grass		
Tragus racemosus	Large carrotseed grass		
Urochloa panicoides	Herringbone grass		
Broad	Broadleaved weeds:		
Amaranthus deflexus	Perennial pigweed		
Amaranthus hybridus	Common pigweed		
Amaranthus spinosus	Thorny pigweed		
Amaranthus thunbergii	Red pigweed		
Chenopodium album	White goosefoot		
Chenopodium carinatum	Green goosefoot		
Cleome menophylla	Spindlepod		
Crotalaria sphaerocarpa	Mielie Crotalaria		
Flaveria bidentis	Smelter's bush		
Portulaca oleraceae	Purslane		
Schkuhria pinnata	Dwarf marigold		
Tribulus terrestris	Devil's thorn		
Weeds controlled variably:			
Anthemis cotula	Stink mayweed		
Bidens pilosa	Common blackjack		
Commelina benghalensis	Bengal wandering jew		
Cosmos bipinnatus	Cosmos		
Datura ferox	Large thorn apple		
Datura stamonium	Common thorn apple		
Stellaria media	Chickweed		
Tagetes minuta	Khakiweed		
Xanthium strumarium	Cocklebur		

NOTE

As **SUNDRY 500 WP** controls annual broadleaved weeds, other broadleaved weed species not listed above may be controlled to a greater or lesser extent. The registration holder however does not accept any liability in respect of the control of unlisted weeds.
