Fungicide

PREDATOR™ 200 EC

Reg. No. L 11044 Act/Wet No. 36 of/van 1947

P8431 10,2023 Version 02

An agricultural emulsifiable concentrate contact bactericide and fungicide for the control of the listed diseases on cotton, groundnuts, potatoes, beans, tomatoes and certain other vegetable and horticultural crops,

'n Landboukundige emulgeerbare konsentraat kontak bakterie- en swamdoder vir die beheer van genoemde siektes op katoen, grondbone, aartappels, bone, tamaties en sekere ander groente- en tuinboukundige gewasse.

ACTIVE INGREDIENT / AKTIEWE BESTANDDEEL

Dichlorophen 200 q/e Dichlorofen

GROUP

FUNGICIDE

DANGER

Hazard Statements:

lasting effects.

Flammable liquid and vapour. Causes serious eye irritation May cause drowsiness or dizziness Toxic to aquatic life with long

Precautionary Statements:

Do not breathe mist, vapours or spray.

Keep away from heat, hot surfaces, open flames and other ignition sources (No smoking).

Registration holder / Registrasiehouer: AECI® Limited / Beperk Reg. No. / Nr. 1924/002590/06 P. O. Box / Posbus 14418, Witfield, 1467 Tel: (011) 823 8000 Website / Webblad: www.aeciworld.com www.villacrop.co.za

WARNINGS:

GHS Hazard Statements Flammable liquid and vapour. Causes serious eye irritation. May cause drowsiness or dizziness. Toxic to aquatic life with long lasting effects

ALLOW THE FOLLOWING MINIMUM NUMBER OF DAYS BETWEEN LAST APPLICATION AND HARVESTING:

BEANS, TOMATOES, VEGETABLES & OTHER EDIBLE CROPS:

COTTON:

DO NOT APPLY LATER THAN 14 DAYS BEFORE HARVESTING AND NOT AFTER BOLLS HAVE OPENED.

GROUNDNUT HAY: DO NOT USE AS FODDER PRIOR TO 6 WEEKS AFTER LAST APPLICATION. PHYTOTOXICITY MAY OCCUR AT HIGH TEMPERATURES AND WHEN DOSAGE RATES HAVE BEEN EXCEEDED. **CUCUMBERS:**

Poisonous when swallowed. May cause skin irritation.

Apply to edible crops as soon as it has been planted.

Store away from food and feedstuffs.
Keep out of reach of children, uninformed persons and animals.
FLAMMABLE: Do not store or handle near open flame.

Re-entry: Do not enter treated area until spray deposit has dried unless wearing protective clothing.
In case of poisoning – CALL A DOCTOR AND MAKETHIS LABEL AVAILABLE TO HIM/HER.

<u>Aerial application</u> - notify all inhabitants of the immediate area to be sprayed and issue the necessary warnings. Do not spray over or allow drift to contaminate water or adjacent areas

ALTHOUGH THIS REMEDY HAS BEEN EXTENSIVELY TESTED UNDER A LARGE VARIETY OF CONDITIONS THE REGISTRATION HOLDER DOES NOT WARRANT THAT IT WILL BE EFFICACIOUS UNDER ALL CONDITIONS BECAUSE THE ACTION AND EFFECT THEREOF MAY BE AFFECTED BY FACTORS SUCH AS ABNORMAL SOIL, CLIMATIC AND STORAGE CONDITIONS; QUALITY OF DILUTION WATER, COMPATIBILITY WITH OTHER SUBSTANCES NOT INDICATED ON THE LABEL AND THE OCCURRENCE OF RESISTANCE OF THE DISEASES AGAINST THE REMEDY CONCERNED AS WELL AS BY THE METHODY TIME AND ACCURACY OF APPLICATION. THE REGISTRATION HOLDER FURTHERMORE DOES NOT ACCEPT RESPONSIBILITY FOR DAMAGE TO CROPS, VEGETATION, THE ENVIRONMENT OR HARM TO MAN OR ANIMAL OR FOR LACK OF PERFORMANCE OF THE REMEDY CONCERNED DUE TO FAILURE OF THE USER TO FOLLOW THE LABEL INSTRUCTIONS OR TO THE OCCURRENCE OF CONDITIONS WHICH COLL IN DOIT HAVE BEEN FORESFEN IN TERMS OF THE REGISTRATION OR TO THE OCCURRENCE OF CONDITIONS WHICH COULD NOT HAVE BEEN FORESEEN IN TERMS OF THE REGISTRATION. CONSULT THE SUPPLIER IN THE EVENT OF ANY UNCERTAINTY.

PRECAUTIONS:

GHS Precautionary Statements
Keep away from heat, hot surfaces, open flames and other ignition sources. No smoking.
Do not breathe mist, vapours or spray.
Wash thoroughly after handling.
Wear protective glove, protective clothing, eye protection & face protection
IF INHALED: Remove person to fresh air and keep comfortable for breathing.
IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.

Wash contaminated clothing immediately after spraying.

Wash with soap and water immediately after use or accidental skin contact.

Do not eat, drink or smoke whilst mixing or applying or before washing hands and face and changing clothes.

Prevent contamination of food, feed, drinking water and eating utensils.

Prevent drift onto other edible crops, grazing, rivers, dams and areas not under treatment.

Clean applicator thoroughly before re-using and dispose of wash water where it will not contaminate crops, grazing, rivers and dams.

Triple rinse empty container: Invert the empty container over the spray or mixing tank and drain for at least 30 seconds after the flow has slowed down to dripping. Thereafter rinse the empty spray or mixing tank and drain for at least 30 seconds after the flow has slowed down to dripping. Thereafter rinse the empty spray or mixing tank and drain for at least 30 seconds after the flow has slowed down to dripping. Thereafter rinse the empty container three times in succession with one quarter of the container volume fresh water and decant the rinsate into the spray or mixing tank. Puncture the triple rinse container and dispose of via an approved collector or recycler (www.croplife.co.za). Do not bury, burn or donate the container to any other parties that may use it as a container for food or beverages.

RELEVANT SUBSTANCES:

Substance name (IUPAC/EC)	Concentration % by weight	Classification	
		EC1272/2008	
Propyl alcohol	20-30%	Flammable liquid (Category 2) H226. Serious eye damage (Category 1) H318. STOT SE 3 H336	
Poly(oxy-1,2-ethanediyl), .alpha(2-propylheptyl)- .omega	20-30%	Acute toxicity oral (Category 4) H302. Serious eye damage (Category 1) H318.	
Dichlorophen tech	10-20%	Acute toxicity oral (Category 4) H302. Eye irritation (Category 2) H319. Aquatic acute 1 H400. Aquatic chronic 1 H410.	
Potassium hydroxide	1-5%	Acute toxicity oral (Category 4) H302.Skin corrosion (Category 1B) H314.	

NOTE: The other ingredients not included above, do not cause or contribute towards the correct GHS classification of PREDATOR 200 EC and are therefore, in terms of the South African Regulations for Hazardous Chemical Agents - 2021; Regulation 14(b), not listed

FIRST AID:

In case of inhalation: If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

The data attention.

In case of skin contact: In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention.

In case of eye contact: Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Cold water may be used. Get medical attention immediately.

In case of ingestion: Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an

unconscious person. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical attention. RESISTANCE WARNING:

ance management, PREDATOR 200 EC is a Group Code 34 fungicide. Any fungus may contain individuals naturally resistant to PREDATOR 200 EC and other Group Code 34 fungicides. The r are used repeatedly. The resistant fungi may not be controlled by PREDATOR 200 EC or any other Group Code 34 fungicide.

- Avoid exclusive repeated use of fungicides from the same fungicide group codes. Alternate with fungicides of different fungicide group codes, or use tank mixtures of different fungicide group codes.

 Integrate other control methods [chemical, cultural, biological] into disease control programmes
- For specific information on resistance management contact the registration holder of this product.

DIRECTIONS FOR USE: USE ONLY AS DIRECTED

Aerial application may only be done by a registered aerial application operator using a correctly calibrated, registered aircraft according to the instructions of SANS Code 10118 (Aerial Application of Agricultural Remedies). It is important to ensure that the spray mixture is distributed evenly over the target area and that the loss of spray material during application is restricted to a minimum. It is therefore essential that the following criteria are met

- Use suitable atomizing equipment (hydraulic nozzles or rotary atomizers) that will produce the desired droplet size and coverage, but which will ensure the minimum loss of product through drift.
- The operator must use a setup that will produce a droplet spectrum with the lowest possible relative span.

 All nozzles / atomisers should be positioned within the inner 60 to 75% of the wingspan to prevent droplets from entering the wingtip
- Application parameters:

 A minimum volume of 30 − 40 ℓ spray mixture per hectare is recommended. As this product has not been evaluated at a reduced

 A minimum volume of 30 − 40 ℓ spray mixture per hectare is recommended. As this product has not been evaluated at a reduced
- volume rate, the registration holder cannot guarantee efficacy, or be held responsible for any adverse effects if this product is applied A droplet coverage of 50 - 70 droplets per cm² must be recovered at the target. The CV for droplet distribution must not exceed 40 %.

 A droplet spectrum with a VMD (Volume Median Diameter) of 250 is recommended. Ensure that the production of fine droplets (smaller
- than 150 microns) is restricted to a minimum.
- The height of the spray boom should be maintained at 3-4 metres above the target. Do not spray when aircraft is in a climb, at the top or during a dive, or when banking.
- Apply before the crop becomes too dense, thus preventing proper coverage of the plants

- Meteorological conditions: The difference between the wet and dry bulb readings as determined by a whirling hygrometer, must not exceed 8 $^{\circ}\mathrm{C}$
- Do not spray under turbulent, unstable conditions during the heat of the day when rising thermals and downdraughts occur. Do not spray under temperature inversion conditions (spraying in or above the inversion layer).
- Do not spray if the wind speed exceeds 15 km/h.

Ensure that fields are accurately marked and that the aerial spray operator knows exactly which fields to spray

Obtain an assurance from the aerial spray operator that the above requirements will be me

COMPATIBILITY:
PREDATOR 200 EC is an alkaline formulation. Do not apply with any other product which will reduce the pH in the spray tank or fertilizer PREDATOR 200 EC is an alkaline formulation. Do not apply with any other product while reduce the PH in the spray tank of refullizer concentrate tank feeding to pivot, drip or conventional irrigation systems (e.g. incompatible with ammonium nitrate). PREDATOR 200 EC is only compatible with alkaline pesticides and foliar feeds. Do not mix PREDATOR 200 EC with products which will lower the pH in the spray tank (spraying) and fertilizer concentration tank (fertigation). Use a suitable adjuvant to enhance the activity of PREDATOR 200 EC. When using PREDATOR 200 EC in combination with Cungfu 538 SC (Reg. No. 17526, Act No. 36 of 1947) or Kocide 2000 (Reg. No. L6137, Act No. 36 of 1947). When used alone as a foliar spray, add a suitable sticker such as Bio-Film (Reg. No. L3684, Act No. 36 of 1947). Do not add any acidifier or adjuvant with acidifying features.

APPLICATION METHODS:

Leaf application:
For additional fungal and bacterial disease control it is advisable to combine CungFu 538 SC /Kocide 2000 with PREDATOR 200 EC applications in sufficient water to ensure complete coverage of the plants

For control of soil borne diseases PREDATOR 200 EC may be applied via the irrigation system or as a drench. If applied by pivot, the irrigation cycle should be operated at maximum speed i.e. 5 - 7 mm. The degree of infection will determine the volume of water applied. It is of utmost importance to apply PREDATOR 200 EC in sufficient water to penetrate and to reach the source of infection or permit adequate protection e.g. potato tubers. It is essential that infection be monitored at a constant basis. PREDATOR 200 EC should not be applied to plants in tunnels, if the plants are under stress. Application to crops under protection should be aimed at the root zone in sufficient water ($2 \ell / 1 000 \ell$ water) applied when necessary. Do not use **PREDATOR 200 EC** in closed hydroponic systems or in any instance where water is circulated.

Where stem infections appear either at or below soil level, special care must be taken to wet the target area thoroughly. In such cases use PREDATOR 200 EC as a drench, in not less than 1 000 \(\ell \) water/ha, or as transplant solutions

To prevent contamination of disease free lands with soil borne diseases, ensure that no movement of tractors, implements or labourers

APPLICATION TABLE:

		I	
CROP	DISEASE	APPLICATION RATE PER 100 ℓ WATER OR AS INDICATED	REMARKS
FIELD CROPS: POTATOES	STEM CANKER (Rhizoctonia solani)	3 ℓ/ha	1st Treatment: At planting: Apply as a row application over the seed potatoes in a minimum of 500 ℓ water/ha. Close furrow immediately after application.*
		3 ℓ/ha	2nd Treatment: At or prior to emergence. Apply via sprinkler or pivot irrigation with 5-10 mm (ie. 50 000 – 100 000 /) water/ha, depending on soil type. Use the lower water volume on sandy soils and the higher volume on heavy soils.
		3 ℓ/ha	3rd Treatment: Summer plantings: An additional PREDATOR 200 EC application should be made before the flowering stage.
			If the above preventative programme has not been followed, PREDATOR 200 EC may be applied at 3 //ha as a corrective treatment as soon as the first symptoms are noticed. Repeat 7 days later where a high infection pressure persists.
			* With furrow application, the best results will be obtained by mounting one fan jet nozzle over the opened plant furrow and one solid cone nozzle in a position to spray the covering soil.
COTTON	ANGULAR LEAF SPOT (Bacterial blight) (Xanthomonas malvacearum)	1 ℓ/ha 1.5 ℓ/ha 1 - 1.5 ℓ/ha	Ground application: Apply 125-200 ℓ water/ha. APPLY AT: 1) Early square stage. 2) Square stage (first flowers) 45-60 days after planting 3) First bolls (60 - 80 days after planting) 4) 7-14 days after 3rd spray 5) 7-14 days after 4th spray
			Aerial application: Apply in 30-40 ℓ water/ha.
VEGETABLES: COLE CROPS	BACTERIAL SPOT (Pseudomonas maculicola)	200 mℓ	Commence spraying at the first signs of disease. Repeat at 7-14 day intervals if necessary, using not less than 500 ℓ spray mixture per hectare.
LETTUCE	ROT (Pythium spp;	3 ℓ/ha	Pre-plant: Apply in at least 500 ℓ water/ha as a total surface spray.
	Rhizoctonia solani; Botrytis cinerea)	2 ℓ/ha	Post-planting: Apply as a cover spray when the first signs of the disease appear and repeat every 7-14 days if necessary.
CUCUMBERS	CUCUMBER WILT (Pythium spp.)	300 mℓ	Pre-seeding: Apply as a drench using 400 mℓ of PREDATOR 200 EC mixture per 10 ℓ plastic container.
		200 mℓ	Post emergence: In case of re-infection repeat drench treatment as indicated above, using the 200 m ℓ /100 ℓ water concentration.
			Note: Phytotoxicity may occur if the specified dosage rate is increased and at temperatures above 35°C.
GREEN PEPPERS	DAMPING-OFF	200 mℓ	Apply as a drench treatment over established plants in seedling trays.
SEEDLINGS GENERALLY: VEGETABLES,	DAMPING-OFF	200 mℓ	Growth medium treatment: Pre-seeding: Use 40 / of the PREDATOR 200 EC mixture to treat one cubic metre of growth medium.
FLOWERS, ORNAMENTALS, ETC.		100 mℓ	Seedlings: Above application should be followed up with a drench treatment once the seedlings are established.
		200 mℓ	Seedbed treatment: Pre-emergence: Apply as a drench treatment.
		100 mℓ	Post-emergence: Apply as a drench treatment and repeat every 7-10 days depending on disease pressure.
HYDROPONIC SOLUTIONS	ALGAE spp.	10 mℓ /100 mℓ	Treat water source every 4-5 weeks depending on degree of alga growth.
TOMATOES	DAMPING-OFF (Rhizoctonia solani	200 mℓ	Apply as a post-plant drench at \pm 50-100 m/ mixture per plant depending on size of plant.
	and <i>Pythium</i> spp.)	1.0 - 1.5 ℓ/ha	For drip irrigated tomatoes apply via drip at 1 - 1.5 ℓ /ha depending or size of plant.
BEANS	ROOT ROT (Rhizoctonia solani and Pythium spp.)	20 mℓ/100 m row	Pre-emergence or at emergence: Apply as a row treatment with planting or at emergence. Use 20 mℓ PREDATOR 200 EC in at least 3 ℓ water per 100 m plant row.
		2 ℓ/ha	Post emergence: Use in at least 500 ℓ water/ha to ensure good spray cover.
ONIONS & GARLIC	WHITE BULB ROT (Sclerotium cepivorum)	2-3 ℓ/ha	Inspect seedbeds regularly and spray immediately when disease is observed, or apply the following programme: Seedlings: Commence treatment at 4-6 true leaf stage and repeat every 14 days or at shorter intervals if necessary.
	(Pyrenochaeta terrestris)		Transplants: Apply the first application when 2-4 new leaves have formed after transplanting. Repeat within 14 days or when necessary.
			Sets: Commence treatment with emergence of the 6-8th leaf and repea after 14 days or when necessary. Apply by means of irrigation system ir at least 3-5 mm (30 000 - 50 000 /) water/ha or spray in a minimum volume of 800 / water per hectare and irrigate immediately afte application with 3-5 mm water. A rigid programme should be followed but if yellow, disease patches appear in the field these should be treated individually at the higher rate (see notes on sanitation).
GROUNDNUTS	LEAF SPOT (Cercospora arachidicola)	2-3 l/ha	Apply the first treatment 3 weeks after emergence. Use the higher dosage where groundnuts were planted repeatedly. Depending on rainfall, prevailing temperatures and disease pressure follow up with 3-4 applications at 2-3 weekly intervals and use the lower rate. Do not apply in less than 400 \(\ell \) water per hectare.
	WEB BLOTCH (Phoma arachidicola)	2-3 ℓ/ha	For the suppression of web blotch, apply as above.
